Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Yano et al (US 6866393).

Yano discloses a reflection-type liquid crystal display device comprising: a light guide plate 1 having a polarizing element 24 stuck or adhered thereto on the side facing a reflection-type liquid crystal display panel and arranged maintaining a predetermined gap relative to the reflection-type liquid crystal display panel; a source of light 2 arranged on an end surface side of the light guide plate; a light-diffusing function imparted to the surface of the reflection-type liquid crystal display panel on the side facing the light guide plate.

Yano discloses the reflection-type liquid crystal display device according to claim 1, wherein the reflection-type liquid crystal display panel has a rough surface on the side facing the light guide plate (see element 25 from at least Figures 1-2 and col. 9, third paragraph).

Yano discloses the reflection-type liquid crystal display device comprising a film 25 having a light-diffusing function is stuck to the surface of the reflection-type liquid crystal display panel on the side facing the light guide plate (see at least Figures 1-2).

Art Unit: 2871

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yano as applied to claims 1-3 above.

Materials such as TAC (triacetyl cellulose) used for the light diffusing film are common and known in the art for achieving advantages such as high transparency. Therefore, it would have been at least obvious to one of ordinary skill in the art at the time the invention was made to employ materials such TAC for the light diffusing film for achieving advantages such as high transparency.

Yano discloses the light diffusing film equalizing the brightness by the prevention of uneven light (see at least col. 9, lines 18-20). Also, the light diffusing film comprising reflection-preventing characteristic(s) is common and known in the art (if needed, see conventional/prior art LCD device, as disclosed in Applicant's background of the invention).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Matsuda ('999) discloses a front-light and reflective guide LCD comprising a polarizer adhering to the light guide, a diffusing film/anti-reflection means adhering to the polarizer.
